EDUCATION

Indian Institute of Information Technology, Ranchi	2023 – 2027
Bachelor of Technology in Electronics and Communication Engineering	CGPA : 8.75
Holy Cross School, Kolkata	2011 – 2023
ISC (Class XII)	12th: 95%

TECHNICAL SKILLS

Backend & Systems: Distributed Systems, RESTful APIs, Microservices, OOP Design, JWT Authentication
Languages: JavaScript (Node.js), TypeScript, Python, C++, SQL
Databases: PostgreSQL, MongoDB, Redis, Prisma ORM, Mongoose ORM
Frameworks: Node.js, NestJS, Express.js, React.js, Next.js, Tailwind CSS
Cloud & DevOps: AWS (EC2, S3, SQS, Lambda), Docker, Nginx, CI/CD Pipelines
Web3: Solana, Smart Contracts, Privy (Wallet Auth)
Developer Tools: Git, GitHub, WebSockets, Gemini API

EXPERIENCE

Tringbox AI	May 2026 – Present
Software Engineer Intern	Remote
– Architected and secured a scalable Node.js/NestJS backend pipeline processing 1,200+ monthly in-venue interactions into shareable MP4s, applying IDOR security patches and SQS job deduplication across a historical dataset of 27,000+ requests. – Built an end-to-end invoice generation system for credit purchases, integrating secure webhooks for Paytm and Cashfree to process 25,500+ transactions with 100% ledger reconciliation accuracy. – Engineered a role-based Tester Monitoring dashboard using JWT authentication and API polling to synchronize live MongoDB queues across 1,800+ active venues.	
Draviya	Oct 2025 – Present
Co-founder & Lead Developer	Ranchi, India
– Designed and deployed scalable RESTful APIs utilizing Node.js, Express, and PostgreSQL to securely process user data, wallet interactions, and initial token offerings (IPO). – Engineered a decentralized Web3 platform on Solana, tokenizing creators as on-chain assets and implementing a bonding-curve smart contract that graduates to a Raydium AMM upon reaching liquidity thresholds. – Spearheaded frontend architecture using React.js and Tailwind CSS, integrating Privy for wallet-less authentication to reduce onboarding friction via email and social logins.	

PERSONAL PROJECTS

ScrapeBot  	2025
Next.js, Node.js, Gemini API, AES-256	
– Built a web scraping automation platform where users design custom scraping workflows through a visual, node-based interface built with Next.js and React Flow. – Integrated the Gemini API to let users extract structured JSON data using natural-language prompts instead of manual selectors, and secured stored API credentials with AES-256-CBC encryption.	
Omniverse 	2025
React.js, Node.js, WebSockets, Phaser.js	
– Built a 2D metaverse platform where users interact in a shared virtual space, combining a Phaser.js game engine frontend with a concurrent Node.js/WebSockets backend. – Ran real-time state synchronization across connected clients to support multiplayer movement, animation, and collision detection.	

POSITIONS OF RESPONSIBILITY

House of Geeks	Sep 2025 – Present
Software Development Wing Lead	IIIT Ranchi
– Led the end-to-end Software Development Life Cycle (SDLC) for multiple technical projects, managing a 15+ member cross-functional team and enforcing strict code quality via GitHub pull requests and peer reviews. – Directed the planning and operational management of a national-level offline hackathon named QuasarxAI with 200+ participants, coordinating event logistics and the deployment of the official web portal.	

ACHIEVEMENTS

Smart India Hackathon – Winner - IIIT Ranchi	2024
Competitive Programming – CodeChef 3 Star, Codeforces Specialist, 200+ LeetCode problems	2023 – Present
